

# Mid-Semester Feedback: Examples from Labs at Brown

*This example from Geological Sciences asks students to provide qualitative feedback on the lab.*

---

Mid-semester lab feedback

Fall 2011

## GEOL1370: Environmental Geochemistry

**The goals of the labs are twofold: 1. to provide hands-on experiences with analytical procedures on environmental samples and 2. to provide opportunities to apply the knowledge gained in lecture.**

Do you think the labs are meeting these goals? Why/why not?

What is one (or more) aspect(s) of the labs that we can change or improve to make them a more effective learning experience for you?

What is one (or more) way(s) that **you** can make the labs a more effective learning experience for yourself?

Which lab was your favorite so far? Why?

Which lab was your least favorite so far? Why?

Any other comments?
